

SUPPORTING AN AGILE WORKFORCE

With **71% of UK businesses** planning to adopt more flexible and agile working practices¹, it has become increasingly important to make sure that your dispersed teams are given the right technology to work effectively from any location. Is your business ready for agile working?

ACCESS TO INFORMATION

Regardless of location or job role, quick and easy access to information is vital for any workforce.

However
24%

of newly-remote workers were unable to carry out their day-to-day duties, because they couldn't access the software or hardware they needed.²

Cloud-based infrastructures allow users to access documents from anywhere, empowering your teams to work efficiently from any location.

43% of hybrid office workers agree that automating document filing and storage would ultimately save time.³

WORKING WITH DOCUMENTS

We all work with documents on a daily basis. Whether that is to process a letter delivered by the postman, or to sign a contract for your latest deal. But doing this remotely without the right technology can be a challenge.

With the right print and digital solutions your employees will be able to interact with documents and information in a variety of ways, boosting your productivity levels.

COLLABORATE EFFECTIVELY

In an agile workplace – with dispersed workers in many locations – you can't always walk up to your colleague's desk to share documents or notes.

Regardless of whether they are in the same room, your workforce needs to be able to collaborate with confidence. With the right tools in place, they can work on documents simultaneously, track changes that have been made or assign tasks to other users. Improving their productivity and accelerating the flow of information in your organisation.

“

Without the cloud companies would have a harder time sharing and co-editing documents securely.⁴

- Forbes

”

Almost
1/4 of cybersecurity professionals say that cyber incidents have increased since transitioning to remote working.⁵

DATA SECURITY

Protecting business information has been at the top of many organisations' agendas for years. But with the boundaries between home, remote and mobile working blurring, security risks are becoming more complex.

You need to ensure that you support your data security whilst optimising employee productivity. Features like user authentication, encryption and redaction can help you protect your business information in an agile working environment.

IT MANAGEMENT

Equipping your teams can at times feel like an impossible task, especially when your existing infrastructure has been focused on office locations.

But the good news is, this transformation can be easier and far more beneficial than you may think. With the right tools you can trust your dispersed technology infrastructure will be easy to manage without draining your IT resources.

Less than
50% of office workers have confidence in their company's current infrastructure for supporting secure and productive remote working.⁶

OVER 80 YEARS OF EXPERTISE
