# GET THE MOST OUT OF YOUR PRINTER FLEET

Are you looking for clear, data-based insights into how to improve productivity across your Canon production printing fleet?

Would more facts about printer performance help you increase efficiency and reduce costs?

Do you need to allocate printing costs accurately to multiple internal or external customers, departments or accounts?

Yes? Then unlock the answers with PRISMAlytics Accounting and PRISMAlytics Dashboard, part of the PRISMA Tools family, the simple, secure and affordable cloud-based production management information toolbox that sits at the heart of your PRISMAsync-driven production department.

Designed for commercial and in-house print service providers of all sizes, PRISMAlytics Accounting and PRISMAlytics Dashboard capture and collate data in near real time. They provide the critical data you need to monitor and analyse performance and allocate costs across all your devices.

## Accounting

### Data you can rely on for cost allocation & performance monitoring

When you're producing short-run jobs, on multiple printers, and for different customer accounts, it's vital to capture costs accurately and charge them to the right budget.

You'd like to automate cost collection and allocation, but maybe you think it's expensive, or involves complex tools and software.

PRISMAlytics Accounting is a simple, secure cloud-based tool for full and accurate print data capture — per job, customer or department — right from the heart of the printer. So you can allocate costs to individual users, departments, groups or clients — no matter how small or large the job.

It's the ideal solution for any print operation using account-based charging — for medium to large-sized commercial and in-house print shops, and legal and other professional firms.

# PRISMAlytics Accounting

Why PRISMAlytics Accounting is the ideal solution for your print business...

## Easy to deploy

PRISMAlytics Accounting is an intuitive entry-level tool that's easy to deploy without training. Simply activate your subscription on PRISMA Home and start using PRISMAlytics Accounting immediately. Once up and running, it needs no additional IT support or resources.

## Secure and accessible

Whatever the size of your operation, you can rely on the security of user and client information. PRISMAlytics Accounting runs on the PRISMA Home Microsoft Azure-based platform, providing safe and secure data capture, provision, reporting and storage. And you can access information when and where you need it.

## Clear reports on demand

PRISMAlytics Accounting collects print, copy and scan data showing device usage, and displays this information in an easy-to-view report display providing insights and comparisons about the activities of individual devices.

The accounting-preparation reports focus on cost allocation, showing how much each account is spending on any given device as well as the media used. So device-related costs can be charged back to a specific user, group, department or client. Accounting reports can also be exported as PDF or CSV files so that data can be included for further processing in financial applications and cost-analysis programs.

Engine-related reports are included as standard and provide data-rich insights into the print output per device, in user-configurable overviews over any time period. For further external analysis, even more detailed reports per job, on users and consumption — account ID, number of prints produced and media used — are available as options.

## Allocate costs accurately and reliably

Capture accurate and reliable data quickly — by job, customer or department — and allocate complex costs to the correct budget-holder or client.

## Reduce costs

Gain a clear and detailed overview of the running costs of each printer, giving you the factual data you need to prepare accurate cost calculations.

# PRISMA Home

PRISMA Home is the hub at the heart of PRISMA. It provides reliable, safe and secure unified access to PRISMA cloud-based applications.<sup>1</sup>

With one single login the portal is available anywhere, anytime — with minimal IT effort — from your smartphone, laptop or other suitable device.

From PRISMA Home you can:

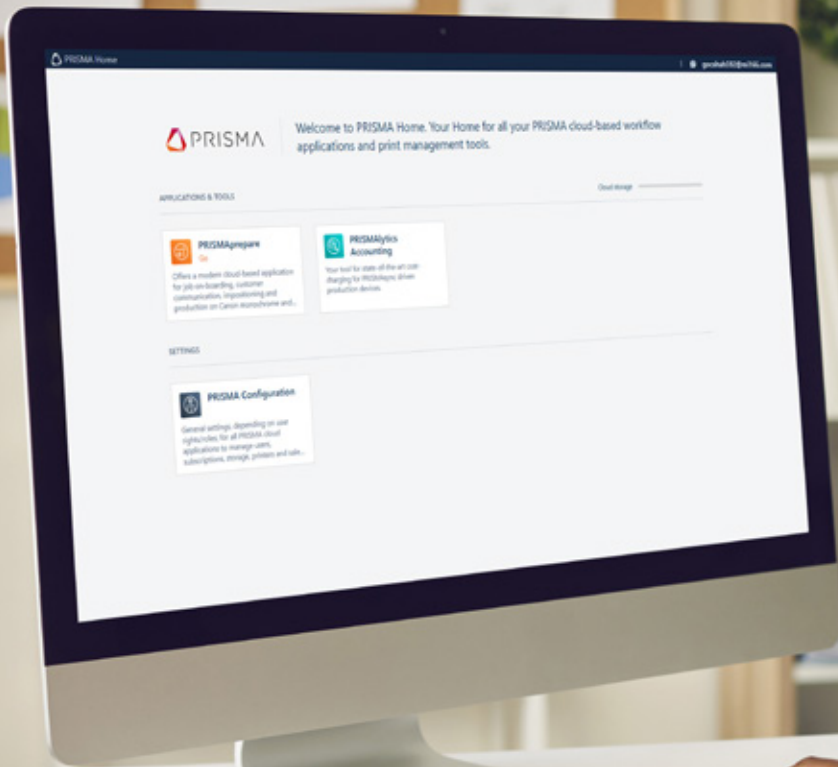

Deploy, configure and manage your PRISMA cloud applications and tools

Store and back up jobs and data securely in PRISMA cloud storage

Configure and manage users and subscriptions centrally

<sup>1</sup> While PRISMA Analytics Dashboard, PRISMA sync Remote Manager and PRISMA sync Remote Match are cloud-based, they are not yet accessible via PRISMA Home. PRISMA Home based versions will be launched in 2022.

# PRISMAlytics Dashboard

## Data to drive your business

As print operations become more complex, sometimes it feels like a full-time job keeping track of everything that's happening across your printer fleet.

The solution is to take control and maximise productivity, efficiency and margins with PRISMAlytics Dashboard, the simple, secure cloud-based production management information tool.

Currently accessible via Google or Microsoft accounts, PRISMAlytics Dashboard provides valuable insights based on hard factual production data collected automatically in near real time from the heart of your supported PRISMAsync-driven printers. It then transforms the information into business-critical overviews, so you not only know what's happening, you understand why it's happening and what you need to do to improve operations.

PRISMAlytics Dashboard is ideal for mid- to large-sized high-production commercial and in-house environments with multiple PRISMAsync-driven production printers.

### Clear reporting

PRISMAlytics Dashboard collects production data on Key Performance Indicators (KPIs) and collates information into clear on-screen, periodic management reports. Device by device, these provide you with the essential insights and comparisons you need to maximise productivity and reduce costs.

### Secure

PRISMAlytics Dashboard provides safe and secure data processing of all aspects of your print operation. Because PRISMAlytics Dashboard only has access to machine and configuration data, all customer and job-sensitive information is completely secure.

### Integrated

PRISMAlytics Dashboard's full integration into your print operation ensures fast, accurate data capture across all your PRISMAsync-driven Canon devices. It replaces traditional non-integrated process monitoring tools that rely on individual links to different parts of the production process.

### Make the most of your printer fleet

Monitor uptime and usage to quickly see the efficiency of your operation and identify opportunities for improvement. Know when printers are idle, or where production has dropped — and why.

### Improve your ROI

See when and how printers are being used, and how they're performing, so that you can deploy your fleet better — which means a better return on your investment.

# PRISMA sync Tools

PRISMA sync Accounting and PRISMA sync Dashboard are just two products in the comprehensive PRISMA Tools family, which tightly integrates into your production print operation through your PRISMA sync-driven engines.

PRISMA Tools also includes:

## PRISMA sync Remote Match

Synchronise multiple printers: With one button click, synchronise and align colour, media and workflow settings from one optimised printer to any similar devices in the fleet.

## PRISMA sync Remote Control

Focus on what really matters: A printer monitoring and warning app for Android and iOS that not only tells you what's going on but also what you need to do to keep production running.

## PRISMA sync Remote Manager

Multi-engine scheduling: Enable multiple operators to remotely submit, monitor and manage jobs all at the same time.
