

Comparative Performance Testing

MAY 2018

CANON OEM INKS VERSUS THIRD-PARTY “COMPATIBLE” INKS

Test Objective:

Keypoint Intelligence – Buyers Lab (Buyers Lab) was commissioned by Canon Europe BV (Canon) to conduct a comparative test of genuine OEM ink cartridges against “compatible” cartridges from a series of third-party brands. The OEM and third-party cartridges were run on the following devices: Canon PIXMA TS3150, Canon PIXMA TS5050, Canon PIXMA TS5150, and Canon PIXMA iP7250. While six third-party cartridge types were tested with Canon PIXMA TS3150 device, 10 compatible brands were tested in the other devices. Cartridges for all ink cartridge brands were tested for page yield, reliability, and image quality. To eliminate cross contamination, brand-new devices were dedicated to the testing of each ink cartridge brand, with 40 devices used in total. Each ink cartridge brand was tested using an ISO test document and Buyers Lab’s proprietary image quality test targets, with each device being run until it had consumed 10 sets of ink cartridges. Image quality was graded from one to three, with one-grade output being unusable, two-grade output being suitable for internal company use only, and three-grade output being suitable for use either internally or externally. Image quality samples were printed on 80 gsm media and 260 gsm glossy media, except for output produced using a Canon PIXMA TS3150, which was printed on 80 gsm media only. All devices and cartridges used in testing were purchased by Buyers Lab on the open market.

Executive Summary

In Buyers Lab’s reliability testing, the Canon OEM cartridges performed flawlessly, with no defective cartridges, image quality degradation, or defects. In contrast, some of the third-party brands suffered multiple out-of-box failures. To give one example, 100% of the Prestige-branded cartridges tested with the Canon PIXMA TS5150 were out-of-box failures. Of the 20 Picture Expert-branded cartridges tested with the Canon PIXMA TS3150, 15 were out-of-box failures. Out-of-box failures aren’t just irritating, they can cause downtime that affects business, and they incur further time costs through the chasing of refunds and the purchase of replacement cartridges.

Even some of the third-party cartridges that weren’t declared out-of-box failures produced such low yields that some brands didn’t even produce their first image quality samples at 250 or 500 impressions. The average CMY yield of the 123-branded cartridges produced when tested with the Canon PIXMA TS5150 was 97% below that of the genuine Canon ink, for example, at just 12 impressions. Although the genuine Canon cartridges didn’t always produce the highest page yields, they consistently exceeded their claimed yield.

All cartridge brands produced text and fine line image quality samples to a good standard with the exception of 123-branded cartridges used in the PIXMA TS3150, which produced three text and fine line quality samples that were deemed to have minor defects.

Only the Canon OEM cartridges produced halftones that were deemed good enough to be used both internally and externally as customer-facing content. Every other rival cartridge brand produced at least one halftone quality sample that Buyers Lab’s technicians deemed to have a minor or severe defect. In the case of the Prestige-branded cartridges used in the Canon PIXMA TS3150, to give just one example, 100% of the 12 halftone quality samples produced were deemed to have a defect (11 severe and one minor). In addition, every cartridge brand except the Canon OEM failed at least one instance of the waterfastness test. All tested brands performed well in the highlighter smear testing.

Those who demand high page yields, great reliability, top-notch image quality, and cartridges that work straight out of the box should invest in genuine Canon ink cartridges.

Reliability

Ink cartridge reliability

Every genuine Canon ink cartridge tested proved to be reliable out of the box, in contrast to some of the tested rival cartridge brands.

Canon PIXMA TS3150

The Canon OEM cartridges performed flawlessly, with no out-of-box failures, unlike the tested third-party brands which each had at least one cartridge that was declared an out-of-box failure. In fact, 15 out of 20 of the Picture Expert and 13 out of 20 of the Stinky Ink cartridges were declared out-of-box failures.

Canon PIXMA TS5050

The majority of ink cartridges performed reliably when used in the PIXMA iP7250, with just two cartridge brands producing out-of-box failures: 123 (2 failures) and Colour Direct (1 failure).

Canon PIXMA TS5150

The Canon OEM ink cartridges performed well throughout testing with the Canon PIXMA TS5150, with no reliability problems and no out-of-box failures. However, one tri-ink cartridge produced fewer prints than we’d expect given the performance of the other OEM tri-ink cartridges tested in the Canon PIXMA TS5150. This is in stark contrast to the third-party cartridges tested, with every third-party brand producing at least eight out-of-box failures. Indeed, all 20 (10 tri-ink, 10 black) cartridges from of the Prestige and Cartridge Kingdom cartridges were declared out-of-box failures.

Canon PIXMA iP7250

Most of the cartridge brands performed reliably when run on the PIXMA iP7250, with four brands— Colour Direct (3 failures), KMP (1 failure), Picture Expert (2 failures), and Stinky Ink (1 failure)—suffering out-of-box failures.

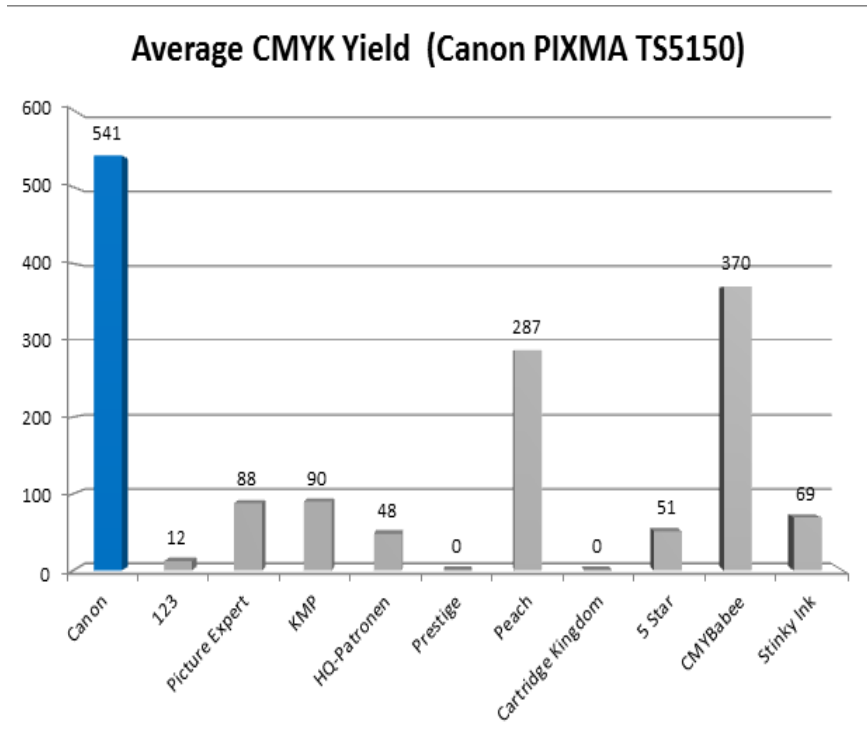

Out-of-Box Failures	
Canon PIXMA TS3150	
Cartridge Brand	Out-of-Box Failures
Canon	0
123	6
Picture Expert	15
Stinky ink	13
Prestige	1
Cartridge Kingdom	2
CMYBabee	1

Canon PIXMA TS5050	
Cartridge Brand	Out-of-Box Failures
Canon	0
123	2
Picture Expert	0

HQ-Patronen	11
Prestige	20
Peach	8
Cartridge Kingdom	20
5 Star	16
CMYBabee	8
Stinky Ink	8

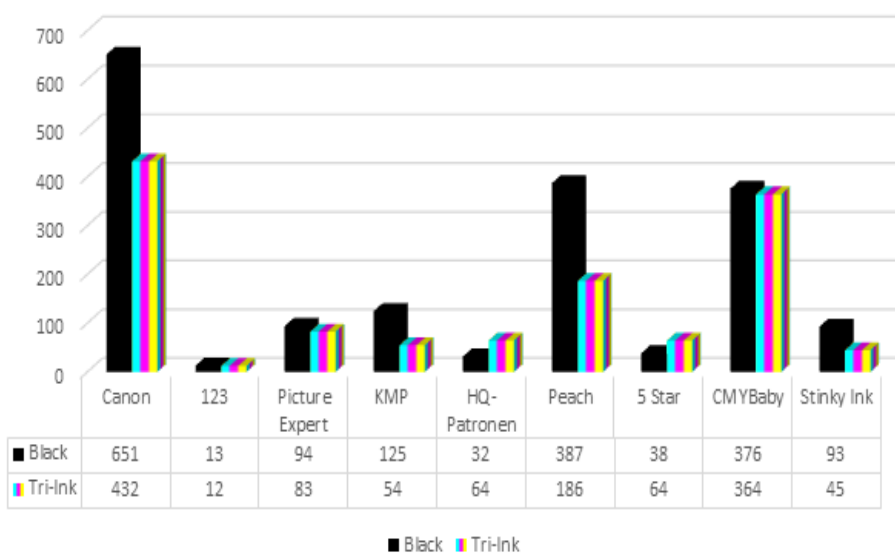

Canon PIXMA TS5150

When tested on the Canon PIXMA TS5150, the Canon OEM ink cartridges produced much higher average yields than the third-party ink cartridges. Indeed, the Canon OEM's average black yield was still 68% higher than that of its nearest rival (Peach), and 4,947% higher than the average black yield of the 123-branded cartridges.

This graph shows the average tested yields of each cartridge brand tested using the Canon PIXMA TS5150.

Average Yields (Canon PIXMA TS5150)

This graph shows the average colour and black page yields for each cartridge brand when tested on the Canon PIXMA TS5150. The Cartridge Kingdom and Prestige results aren't shown because they didn't produce a yield in testing.

Percentage By Which Canon’s Tested Yields Are Higher (Canon PIXMA TS5150)			
Cartridge Brand	CMY	Black	CMYK
123	3,496%	4,947%	4,247%
Picture Expert	423%	592%	513%
KMP	693%	421%	503%
HQ-Patronen	573%	1,960%	1,031%
Peach	131%	68%	89%
5 Star	574%	1,604%	959%
CMYBabee	19%	73%	46%
Stinky Ink	867%	600%	687%

This table shows the percentage by which the tested yield of the Canon OEM ink was higher than each of its rivals for average CMY, Black, and CMYK yields. The Cartridge Kingdom and Prestige results aren’t shown because they didn’t produce a yield in testing.

Canon PIXMA TS3150

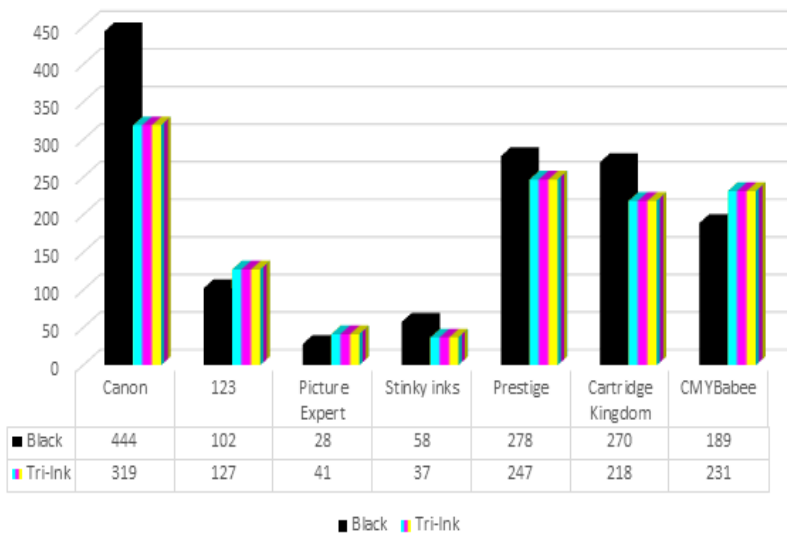

When tested on the Canon PIXMA TS3150, the Canon OEM ink cartridges produced much higher average yields than the third-party ink cartridges. The OEM cartridges’ average CMY yield was 767% higher than the Stinky Inks’ average CMY yield, for example, while the OEM cartridges’ average black yield was 1,472% higher.

Average CMYK Yield (Canon PIXMA TS3150)

This graph shows the average tested yields of each cartridge brand tested using the Canon PIXMA TS3150.

Average Yields
(Canon PIXMA TS3150)

This graph shows the average colour and black page yields for each cartridge brand when tested on the Canon PIXMA TS3150.

Percentage By Which Canon’s Tested Yields Are Higher (Canon PIXMA TS3150)

Cartridge Brand	CMY	Black	CMYK
123	151%	334%	233%
Picture Expert	674%	1,472%	998%
Stinky ink	767%	670%	708%
Prestige	29%	60%	45%
Cartridge Kingdom	46%	64%	56%
CMYBabee	38%	135%	56%

This table shows the percentage by which the tested yield of the Canon OEM ink was higher than each of its rivals for average CMY, Black, and CMYK yields.

Canon PIXMA TS5050

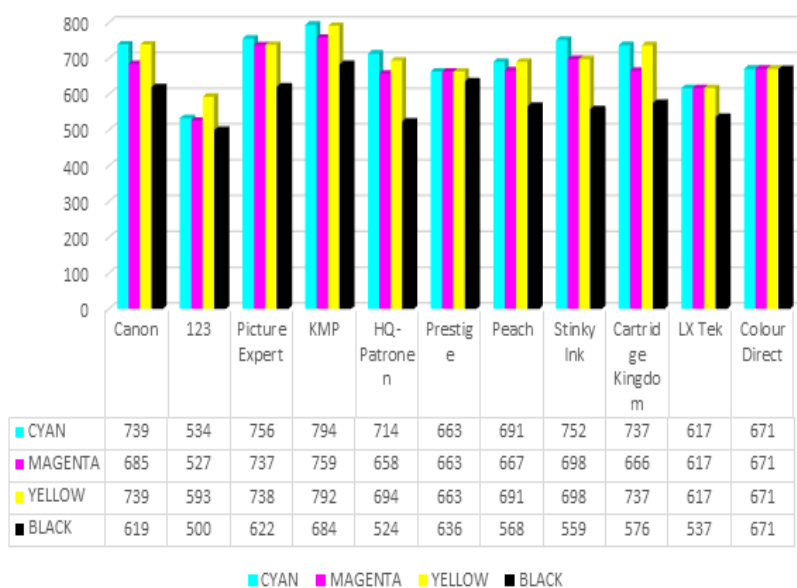

The Canon OEM ink delivered the third-highest average CMY yield with the Picture Expert and KMP brands producing 3% and 8% higher yields, respectively. The 123-branded cartridges were the worst performer, producing average CMY and CMYK yields that were 24% and 23% lower than the Canon OEM ink’s average tested yields. The KMP and Picture Expert brands produced higher average yields than the Canon OEM inks in all colours, except for the Picture Expert brand’s average yellow yield.

**Average CMYK Yield
(Canon PIXMA TS5050)**

This graph shows the average tested CMYK yields of each cartridge brand tested using the Canon PIXMA TS5050. Two brands, Picture Expert and KMP, delivered higher yields.

**Average Yields
(Canon PIXMA TS5050)**

This graph shows the average colour and black page yields for each cartridge brand when tested with the Canon PIXMA TS5050.

Average Yields Compared to PIXMA TS5050 (%)				
Cartridge Brand	CMY Compared To OEM	CMYK Compared To OEM	OEM'S CMY Above Third Party	OEM'S CMYK Above Third Party
Canon	0%	0%	0%	0%
123	-24%	-23%	31%	29%
Picture Expert	3%	3%	-3%	-2%
KMP	8%	9%	-8%	-8%

HQ-Patronen	-5%	-7%	5%	7%
Prestige	-8%	-6%	9%	6%
Peach	-5%	-6%	6%	6%
Stinky Ink	-1%	-3%	1%	3%
Cartridge Kingdom	-1%	-2%	1%	2%
LX Tek	-14%	-14%	17%	16%
Colour Direct	-7%	-4%	7%	4%

This table shows the percentage by which the tested average yields of the third-party inks differed to that of the Canon OEM ink.

Canon PIXMA iP7250

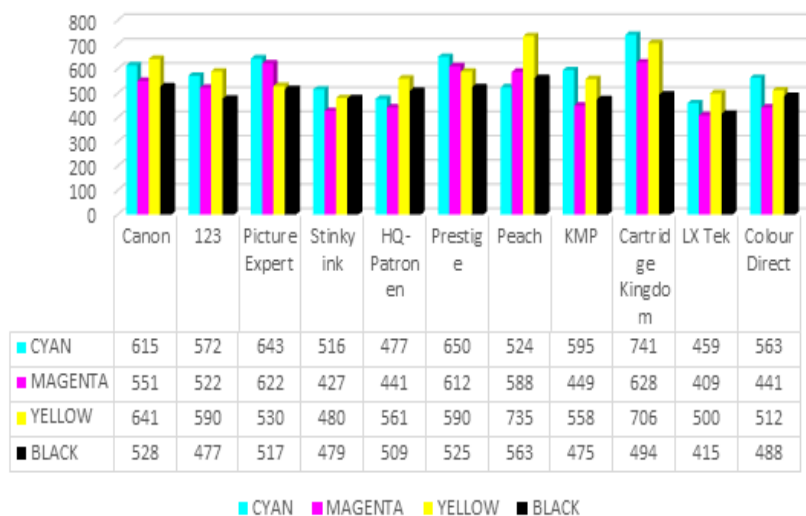

The Canon OEM ink delivered the fourth-highest average CMY and CMYK yields, putting it in the top half of the cohort. The Prestige and Peach inks’ average CMY yields were 2% higher than that of the Canon inks, while the Prestige and Peach inks’ average CMYK yields are 2% and 3% higher, respectively. The lowest performing third-party cartridge brand was LX Tek, and the Canon OEM’s average CMY and CMYK yields were 32% and 31% high than LX Tek’s, respectively.

Average CMYK Yield (Canon PIXMA iP7250)

This graph shows the average tested yields of each cartridge brand tested using the Canon PIXMA iP7250. Although the Canon OEM cartridges yielded more pages than most brands, three brands yielded between 10 and 58 more pages.

Average Yields
(Canon PIXMA iP7250)

This graph shows the average colour and black page yields for each cartridge brand when tested on the Canon PIXMA TS5050.

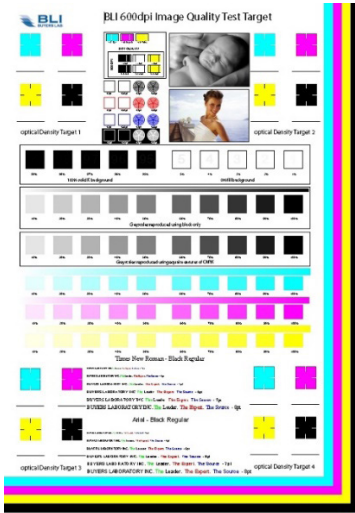

Average Yields Compared to PIXMA iP250 (%)				
Cartridge Brand	CMY Compared To OEM	CMYK Compared To OEM	OEM'S CMY Above Third Party	OEM'S CMYK Above Third Party
Canon	0%	0%	0%	0%
123	-7%	-8%	7%	8%
Picture Expert	-1%	-1%	1%	1%
Stinky ink	-21%	-19%	27%	23%
HQ-Patronen	-18%	-15%	22%	18%
Prestige	2%	2%	-2%	-2%
Peach	2%	3%	-2%	-3%
KMP	-11%	-11%	13%	12%
Cartridge Kingdom	15%	10%	-13%	-9%
LX Tek	-24%	-24%	32%	31%
Colour Direct	-16%	-14%	19%	17%

This table shows the percentage by which the tested average yields of the third-party inks differed to that of the Canon OEM ink.

Image quality

Buyers Lab assessed the image quality of the ink cartridge brands tested using its own proprietary image quality test targets (shown below). Buyers Lab’s technicians printed the test targets at 250-impression intervals.

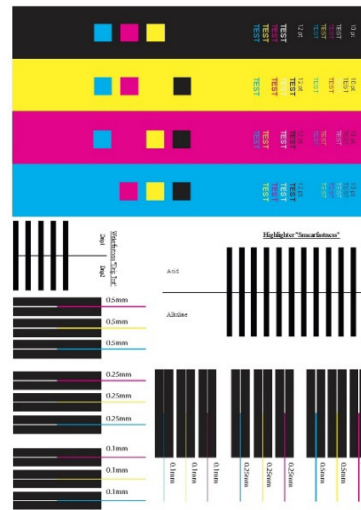

Buyers Lab Image Quality Test Targets

IQ Test Target One

IQ Test Target Two

IQ Test Target Three

Image quality is assessed on halftones, text and fines, and photographic output, and the samples were subjected to a battery of tests to determine image quality. The results were then compared and graded from 1 (severe defect) to 3 (good). Examples showing things that are indicative of the difference in quality between the various grades are shown below.

Grade One (Severe Defect)

Grade Two (Minor Defect)

Grade Three (Good)

Examples of Image Quality Defects

2,000 impressions, severe defect

The image above suffers from white banding that affects the quality of this image and renders it unsuitable for use outside of an organization and even informal use within an organization.

2,000 impressions, minor defect

The image above suffers from banding that affects the quality of this image and renders it unsuitable for use outside of an organization and even informal use within an organization.

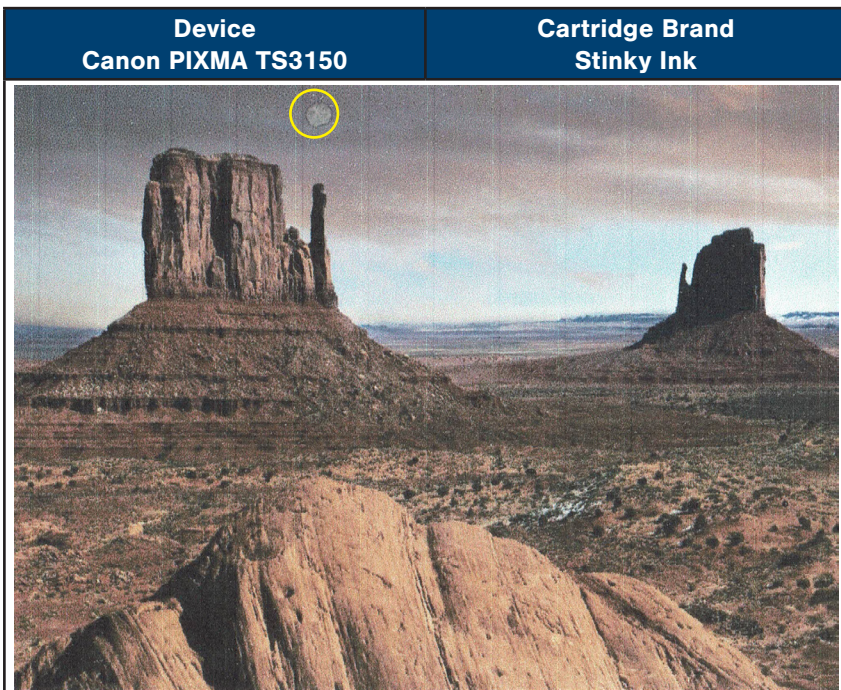

500 impressions, severe defect
The lack of black ink has completely ruined this image and rendered it unusable for informal or formal use.

500 impressions, severe defect
The banding in this image is so apparent that it ruins the image; the banding detracts the viewer's attention from the image and affects the colours.

500 impressions, minor defect
This image suffers from slight banding, but not enough to prevent its informal use within an organization.

250 impressions, minor defect
This image is spoiled by banding and an odd anomaly (highlighted by the yellow circle).

1,000 impressions, minor defect
Banding spoils this image and renders it useful for informal use within a company only.

Canon PIXMA TS5150 (80 gsm)

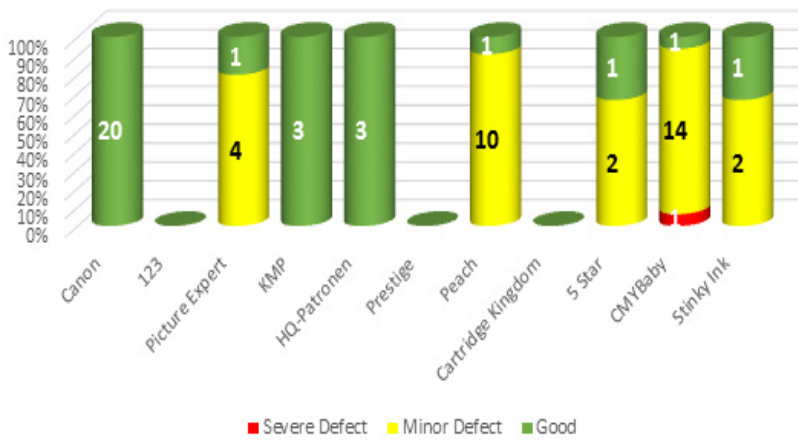

HALFTONES

All of the 20 halftone samples printed with the Canon OEM ink were considered good enough to use inside or outside of an organization. The only other brands whose image quality samples were all considered good were the KMP and HQ-Patronen brands, and the yields produced by these brands meant that they only produced three halftone samples. All the other brands produced at least two image quality samples that were deemed to have a minor defect, while the CMYBabee brand produced a halftone sample that was deemed to have a serious defect.

Indeed, 94% of the CMYBabee brand’s halftone samples were deemed to have defects, with only one sample (6%) considered good enough for distribution outside of a company. Similarly, only one sample of the Picture Expert, Peach, 5 Star, and Stinky Ink brands’ halftone samples were deemed to be good enough for distribution outside of a company.

Please note that the 123, Cartridge Kingdom, and Prestige brands did not produce a high enough yield to print any of the image quality targets.

Halftone Quality (80 gsm)
(Canon PIXMA TS5150)

This graph shows the percentage of each cartridge brand’s halftone image quality samples that are considered to have a minor defect, a severe defect, or be good. Each grade is indicated by a colour, such as yellow, which represents a minor defect. As an example, 100% of the Canon OEM brand’s image quality samples were deemed to be good, so 100% of the Canon OEM brand’s cylinder is coloured green. The graph also shows the number of image quality samples of each grade (the Canon OEM brand produced 20 image quality samples, for example, while the KMP brand produced three).

TEXT AND FINE LINES (80 GSM)

The quality of text and fine lines of all ink cartridge brands was considered good. However, please note that the 123, Cartridge Kingdom, and Prestige brands did not produce a high enough yield to print any of the image quality targets.

Text and Fine Line Quality (80 gsm)
(Canon PIXMA TS5150)

This graph shows the percentage of each cartridge brands’ text and fine line image quality samples that are considered to have a minor defect, a severe defect, or be good. Each grade is indicated by a colour, such as yellow, which represents a minor defect. As an example, 100% of the Canon OEM brand’s image quality samples were deemed to be good, so 100% of the Canon OEM brand’s cylinder is coloured green. The graph also shows the number of image quality samples of each grade (the Canon OEM brand produced 20 image quality samples, for example, while the KMP brand produced three).

OPTICAL DENSITY

A higher optical density reading for black output indicates darker, deeper shades.

Average Print Densities				
Cartridge Brands	Cyan	Magenta	Yellow	Black
Canon	0.96	0.94	0.80	1.17
123	0.00	0.00	0.00	0.00
Picture Expert	0.97	0.91	0.78	1.18
KMP	0.98	0.98	0.79	1.23
HQ-Patronen	0.97	0.92	0.78	1.21
Prestige	0.00	0.00	0.00	0.00
Peach	1.02	0.94	0.82	1.18
Cartridge Kingdom	0.00	0.00	0.00	0.00
5 Star	1.01	0.95	0.77	1.21
CMYBabee	0.98	0.98	0.71	1.22
Stinky Ink	1.02	0.74	0.74	1.19

The higher the number, the higher the density.

Average Densities (80 gsm)
(Canon PIXMA TS5150)

This graph shows the average optical densities of output from each cartridge brand. The higher the number, the higher the density.

Colour Gamut

Overall gamut volumes were comparable among most brands, but 5 Star and Stinky Ink produced the lowest average colour gamut volume. More importantly, the difference between the Canon OEM brand’s highest and lowest colour gamut volumes was much lower than that of the Stinky Ink and CMYBabee brands, which shows that the Canon OEM ink’s colour gamut volumes were more consistent over time.

Average Colour Gamut (80 gsm)
(Canon PIXMA TS5150)

This graph shows the average colour gamut volume for each ink cartridge brand. Canon’s average colour gamut is coloured blue.

WICKING TEST

Wicking can cause output to look sub-par and text to be messy or even illegible. It manifests itself as thin streaks of ink that emanate from the intended print location, perhaps as a line emanating from a text character. In Buyers Lab’s testing, none of the brands tested showed signs of wicking.

Wicking and Bleed (80 gsm)
(Canon PIXMA TS5150)

This graph shows the percentage of each cartridge brand’s image quality samples that were considered to have a minor defect, a severe defect, or be good as a result of Buyers Lab’s Wicking test. Each grade is indicated by a colour, such as yellow, which represents a minor defect.

WATERFASTNESS TEST

Sometimes printed output will come in contact with moisture, so it’s important for the end-user that exposure to that moisture doesn’t have too much of an adverse effect on output. To test the impact of moisture on copy, Buyers Lab’s lab technicians deposited a measured quantity of water on output printed with each ink cartridge brand and allowed it to dry.

Only three brands passed Buyers Lab’s waterfastness test: Canon OEM, Peach, and Stinky Ink. The remaining brands were all considered to be unusable inside or outside of a company, with the exception of the KMP brand, which was deemed to be acceptable for use within a company only.

Waterfastness Test Results (80 gsm)
(Canon PIXMA TS5150)

This graph shows how output from each cartridge brand fared in Buyers Lab’s waterfastness test, with the quality of the image sample used denoted by a colour. A sample deemed unsuitable for use both outside and inside of a company would be coloured red, for example.

HIGHLIGHTER TEST

Highlighting printed output is a common practice, so it’s important that the act of highlighting the printed part of a document doesn’t cause the ink to smudge and make print illegible. Image quality samples from all of the ink cartridge brands tested passed Buyers Lab’s highlighter test.

Highlighter Test Results (80 gsm)
(Canon PIXMA TS5150)

This graph shows how output from each cartridge brand fared in Buyers Lab’s Highlighter test, with the quality of the image sample used denoted by a colour. A sample deemed unsuitable for use both outside and inside of a company would be coloured red, for example.

Canon PIXMA TS3150 (80 gsm)

HALFTONES

All of the 15 halftone samples printed with the Canon OEM ink were considered good enough to use inside or outside of an organization. Indeed, only one third-party cartridge brand produced an entire set of halftone quality samples that were deemed good, and that was the Stinky Ink brand.

100% of the Prestige brand’s halftone quality samples were considered to have a minor or severe defect. Three of the Prestige brand’s halftone quality samples were considered to have a minor defect, while a remarkable 11 samples—79% of its total output of halftone quality samples—were considered to have a severe defect and not good enough to use outside of a company or even to use informally within a company.

Please note that the Picture Expert brand did not produce a high enough yield to print any of the image quality targets.

Halftone Quality (80 gsm)
(Canon PIXMA TS3150)

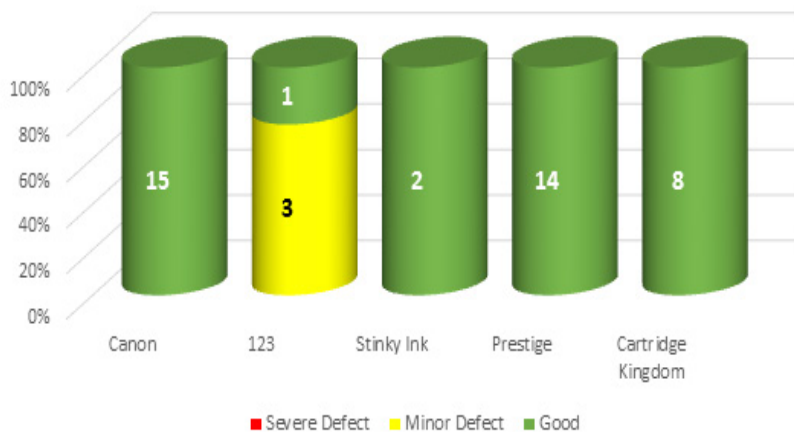

This graph shows the percentage of each cartridge brand’s halftone image quality samples that were considered to have a minor defect, a severe defect, or be good. Each grade is indicated by a colour, such as yellow, which represents a minor defect. As an example, 100% of the Canon OEM brand’s image quality samples were deemed to be good, so 100% of the Canon OEM brand’s cylinder is coloured green. The graph also shows the number of image quality samples of each grade (the Canon OEM brand produced 15 image quality samples, for example, while the Prestige brand produced 14).

TEXT AND FINE LINES (80 GSM)

The quality of text and fine lines of all ink cartridge brands was considered good with the exception of the 123-branded cartridges. Only one of the text quality samples was considered good, and that was produced at the start of testing, while its subsequent three text quality samples—75% of its total output—were deemed to have minor defects.

Text and Fine Line Quality (80 gsm)
(Canon PIXMA TS3150)

This graph shows the percentage of each cartridge brands’ text and fine line image quality samples that were considered to have a minor defect, a severe defect, or be good. Each grade is indicated by a colour, such as yellow, which represents a minor defect. As an example, one of the 123 brand’s image quality samples as deemed to be good, so 25% of its cylinder is coloured green, while 75% of its cylinder is coloured yellow because three of its image quality samples were deemed to have minor defects. The graph also shows the number of image quality samples of each grade (the Canon OEM brand produced 15 image quality samples, for example, while the Stinky Ink brand produced two).

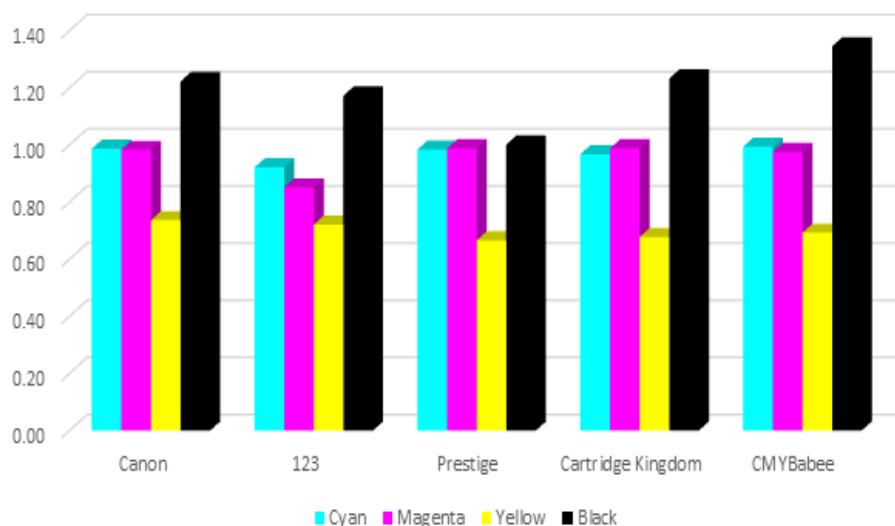

OPTICAL DENSITY

A higher optical density reading for black output indicates darker, deeper shades. All of the tested cartridge brands produced similar average densities, though CMYBabee was the highest.

Average Print Densities				
Cartridge Brand	Cyan	Magenta	Yellow	Black
Canon	0.99	0.98	0.74	1.22
123	0.92	0.85	0.72	1.17
Prestige	0.98	0.99	0.67	1.00
Cartridge Kingdom	0.97	0.99	0.68	1.23
CMYBabee	0.99	0.98	0.69	1.35

The higher the number, the higher the density.

Average Densities (80 gsm)
(Canon PIXMA TS3150)

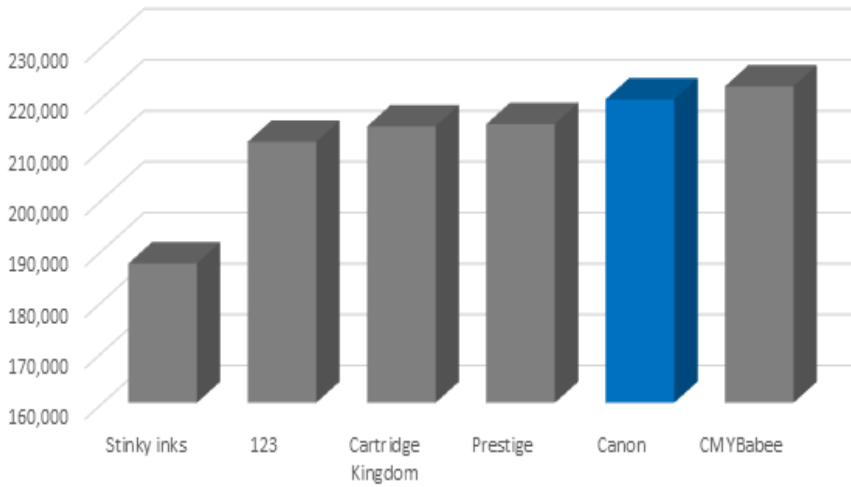

This graph shows the average optical densities of output from each cartridge brand. The higher the number, the higher the density.

COLOUR GAMUT

The Canon OEM brand’s average colour gamut volume was the second-highest, just below the CMYBabee brand’s average colour gamut volume. The lowest average colour gamut volume belongs to the Stinky Ink brand, which only produced two samples.

Average Colour Gamut (80 gsm)
(Canon PIXMA TS3150)

This graph shows the average colour gamut volume for each ink cartridge brand. Canon’s average colour gamut is coloured blue. The Picture Expert cartridge brand’s average colour gamut volume isn’t included, as it only produced one reading at the very start of testing.

WICKING TEST

Wicking can cause output to look sub-par and text to be messy or even illegible. It manifests itself as thin streaks of ink that emanate from the intended print location, perhaps as a line emanating from a text character. In Buyers Lab’s testing, only one of the brands tested showed signs of wicking.

Wicking and Bleed (80 gsm)
(Canon PIXMA TS3150)

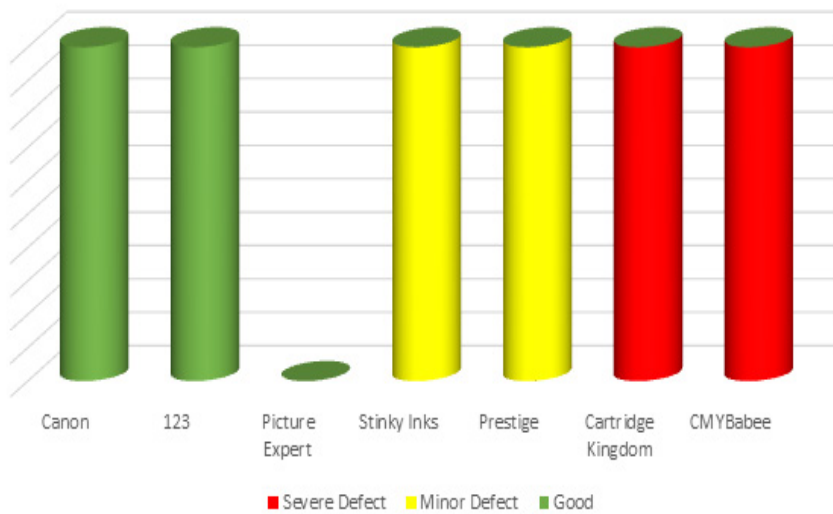

This graph shows the percentage of each cartridge brand’s image quality samples that were considered to have a minor defect, a severe defect, or be good as a result of Buyers Lab’s Wicking test. Each grade is indicated by a colour, such as yellow, which represents a minor defect.

WATERFASTNESS TEST

Sometimes printed output will come in contact with moisture, so it’s important for the end-user that exposure to that moisture doesn’t have too much of an adverse effect on output. To test the impact of moisture on copy, Buyers Lab’s lab technicians deposited a measured quantity of water on output printed with each ink cartridge brand and allowed it to dry.

Only two brands passed Buyers Lab’s waterfastness test: Canon OEM and 123. The Cartridge kingdom and CMYBabee brands were considered to be unusable inside or outside of a company, while the Stinky Ink and Prestige brands were deemed to be acceptable for use within a company only.

Waterfastness Test Results (80 gsm)
(Canon PIXMA TS3150)

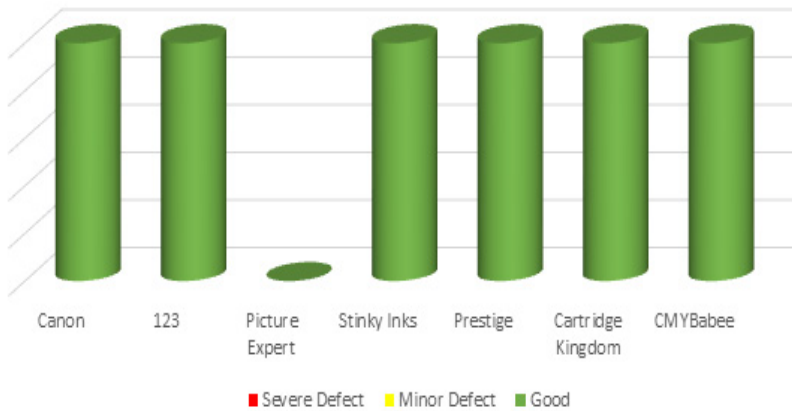

This graph shows how output from each cartridge brand fared in Buyers Lab’s waterfastness test, with the quality of the image sample used denoted by a colour. A sample deemed unsuitable for use both outside and inside of a company would be coloured red, for example. Cartridge brands with no cylinder were not subjected to the waterfastness test.

HIGHLIGHTER TEST

Highlighting printed output is a common practice, so it’s important that the act of highlighting the printed part of a document doesn’t cause the ink to smudge and make print illegible. Image quality samples from all of the ink cartridge brands tested passed Buyers Lab’s highlighter test.

Highlighter Test Results (80 gsm)
(Canon PIXMA TS3150)

This graph shows how output from each cartridge brand fared in Buyers Lab’s Highlighter test, with the quality of the image sample used denoted by a colour. A sample deemed unsuitable for use both outside and inside of a company would be coloured red, for example. Cartridge brands with no cylinder were not subjected to the Highlighter test.

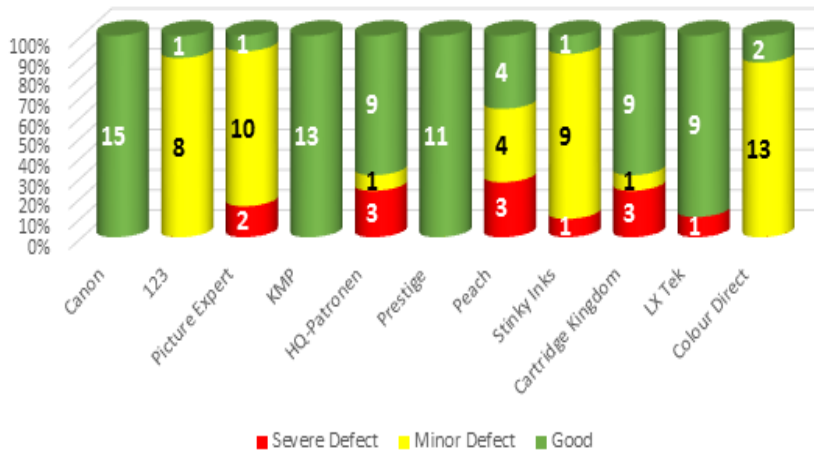

Canon PIXMA TS5050 (80 gsm)

HALFTONES

All of the 15 halftone samples printed with the Canon OEM ink were considered good enough to use inside or outside of an organization, while only two third-party cartridge brands produced halftone quality samples that were all considered good, KMP and Prestige. Of the other eight brands tested, six had at least one image quality sample that was deemed to have a severe defect that would prevent the output being distributed outside of a company or even used informally within an organization.

The Picture Expert-branded cartridges produced 13 halftone quality samples, and 92% of these were deemed to have defects, for example, while 64% of the Peach-branded cartridges’ 11 halftone quality samples were considered to have defects.

Halftone Quality (80 gsm)
(Canon PIXMA TS5050)

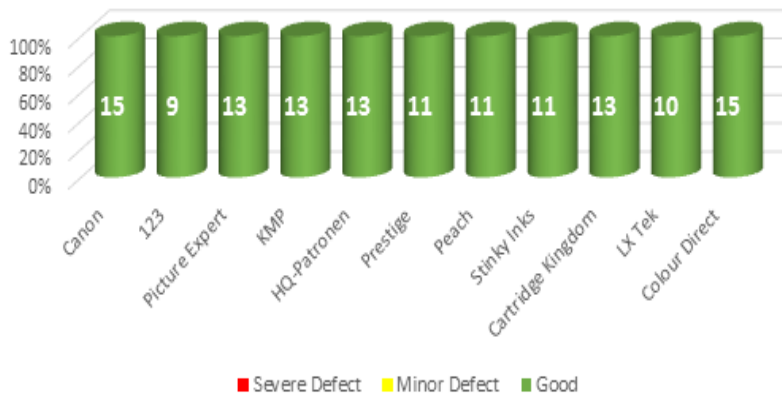

This graph shows the percentage of each cartridge brand’s halftone image quality samples that were considered to have a minor defect, a severe defect, or be good. Each grade is indicated by a colour, such as yellow, which represents a minor defect. As an example, eight of the 123 brand’s nine halftone quality samples were deemed to have minor defects, so 89% of the 123 brand’s cylinder is coloured yellow. The graph also shows the number of image quality samples of each grade (the Canon OEM brand produced 15 image quality samples, for example, while the Prestige brand produced 11).

TEXT AND FINE LINES (80 GSM)

The quality of text and fine lines of all ink cartridge brands, when printed on 80 gsm media, was considered good.

Text and Fine Line Quality (80 gsm)
(Canon PIXMA TS5050)

This graph shows the percentage of each cartridge brand’s text and fine line image quality samples that were considered to have a minor defect, a severe defect, or be good. Each grade is indicated by a colour, such as yellow, which represents a minor defect. As an example, all nine of the 123 brand’s image quality samples are deemed to be good, so 100% of its cylinder is coloured green. The graph also shows the number of image quality samples of each grade (the Canon OEM brand produced 15 image quality samples, for example, while the Peach brand produced 11).

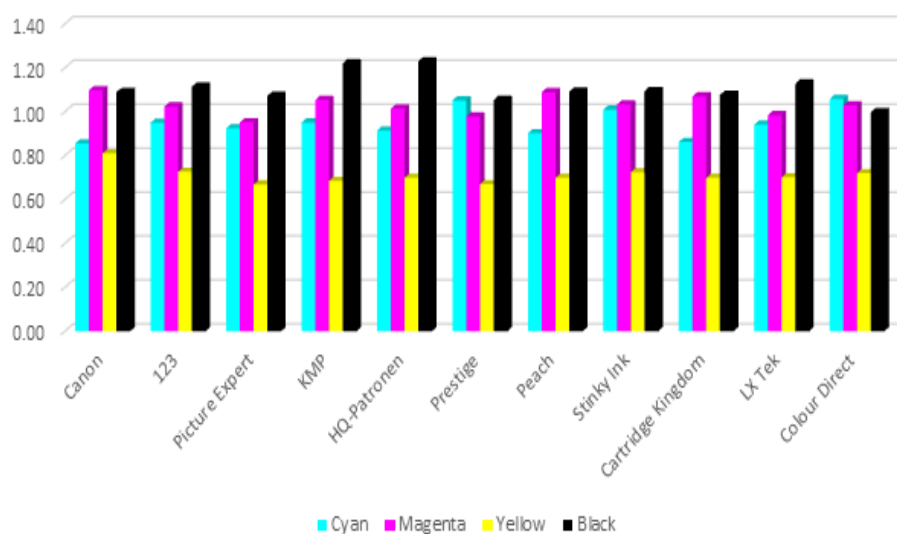

OPTICAL DENSITY

A higher optical density reading for black output indicates darker, deeper shades. The Canon OEM cartridges’ average black density was comparable with the group, while the KMP and HQ-Patronen brands had the highest.

Average Print Densities				
Cartridge Brand	Cyan	Magenta	Yellow	Black
Canon	0.86	1.10	0.81	1.09
123	0.95	1.02	0.73	1.11
Picture Expert	0.92	0.95	0.67	1.07
KMP	0.95	1.05	0.68	1.22
HQ-Patronen	0.91	1.01	0.70	1.23
Prestige	1.05	0.98	0.67	1.05
Peach	0.90	1.09	0.70	1.09
Stinky Ink	1.01	1.03	0.72	1.09
Cartridge Kingdom	0.86	1.07	0.70	1.08
LX Tek	0.94	0.98	0.70	1.13
Colour Direct	1.06	1.03	0.72	1.00

The higher the number, the higher the density.

Average Densities (80 gsm)
(Canon PIXMA TS5050)

This graph shows the average optical densities of output from each cartridge brand. The higher the number, the higher the density.

COLOUR GAMUT

The Canon OEM brand’s average colour gamut volume is the highest. The lowest average colour gamut volume belongs to the HQ-Patronen brand, which was 28% lower than the Canon OEM ink’s average colour gamut volume.

Average Colour Gamut (80 gsm)
(Canon PIXMA TS5050)

This graph shows the average colour gamut volume for each ink cartridge brand. Canon’s average colour gamut is coloured blue.

WICKING TEST

Wicking can cause output to look sub-par and text to be messy or even illegible. It manifests itself as thin streaks of ink that emanate from the intended print location, perhaps as a line emanating from a text character. In Buyers Lab’s testing, none of the brands tested showed signs of wicking.

Wicking and Bleed (80 gsm)
(Canon PIXMA TS5050)

This graph shows the percentage of each cartridge brand’s image quality samples that were considered to have a minor defect, a severe defect, or be good as a result of Buyers Lab’s Wicking test. Each grade is indicated by a colour, such as yellow, which represents a minor defect.

WATERFASTNESS TEST

Sometimes printed output will come in contact with moisture, so it’s important for the end-user that exposure to that moisture doesn’t have too much of an adverse effect on output. To test the impact of moisture on copy, Buyers Lab’s lab technicians deposited a measured quantity of water on output printed with each ink cartridge brand and allowed it to dry.

Of the 11 cartridge brands tested, only four of them (Canon OEM, 123, HQ-Patronen, and KMP) passed the waterfastness test, while the remaining 64% of cartridge brands failed the test.

Waterfastness Test Results (80 gsm)
(Canon PIXMA TS5050)

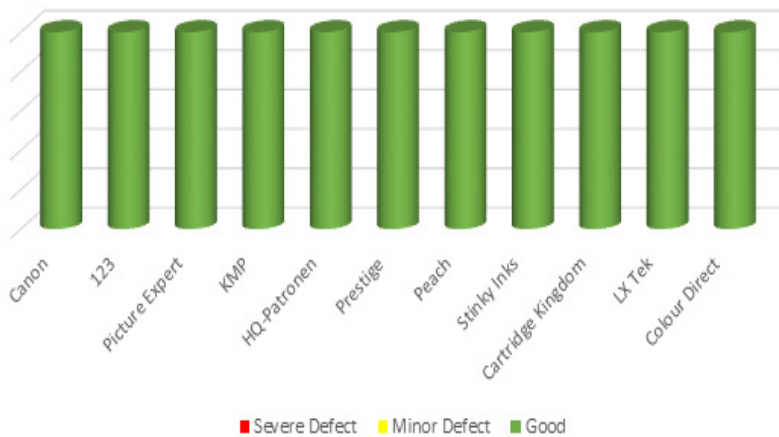

This graph shows how output from each cartridge brand fared in Buyers Lab’s waterfastness test, with the quality of the image sample used denoted by a colour. A sample deemed unsuitable for use both outside and inside of a company would be coloured red, for example.

HIGHLIGHTER TEST

Highlighting printed output is a common practice, so it’s important that the act of highlighting the printed part of a document doesn’t cause the ink to smudge and make print illegible. Image quality samples from all of the ink cartridge brands tested passed Buyers Lab’s highlighter test.

Highlighter Test Results (80 gsm)
(Canon PIXMA TS5050)

This graph shows how output from each cartridge brand fared in Buyers Lab’s Highlighter test, with the quality of the image sample used denoted by a colour. A sample deemed unsuitable for use both outside and inside of a company would be coloured red, for example.

Canon PIXMA iP7250 (80 gsm)

HALFTONES

All of the 13 halftone samples printed with the Canon OEM ink were considered good enough to use inside or outside of an organization. Four of the third-party brands produced at least one image quality sample that was deemed to have a minor defect: Cartridge Kingdom, LX Tek, Picture Expert, and Stinky Ink. 78% of the Picture Expert’s halftone quality samples were considered to have a minor defect, while 22% of the Cartridge Kingdom’s, 17% of the LX Tek’s, and 11% of the Stinky Ink’s halftone quality samples are deemed to have minor defects.

Halftone Quality (80 gsm)
(Canon PIXMA iP7250)

This graph shows the percentage of each cartridge brand’s halftone image quality samples that were considered to have a minor defect, a severe defect, or be good. Each grade is indicated by a colour, such as yellow, which represents a minor defect. As an example, seven of the Picture Expert brand’s nine halftone quality samples were deemed to have minor defects, so 78% of the Picture Expert brand’s cylinder is coloured yellow. The graph also shows the number of image quality samples of each grade (the Canon OEM brand produced 13 image quality samples, for example, while the Prestige brand produced 11).

TEXT AND FINE LINES (80 GSM)

The quality of text and fine lines of all ink cartridge brands, when printed on 80 gsm media, was considered good.

Text and Fine Line Quality (80 gsm)
(Canon PIXMA iP7250)

This graph shows the percentage of each cartridge brands’ text and fine line image quality samples that were considered to have a minor defect, a severe defect, or be good. Each grade is indicated by a colour, such as yellow, which represents a minor defect. As an example, all 10 of the 123 brand’s image quality samples are deemed to be good, so 100% of its cylinder is coloured green. The graph also shows the number of image quality samples of each grade (the Canon OEM brand produced 13 image quality samples, for example, while the Peach brand produced 10).

OPTICAL DENSITY

A higher optical density reading for black output indicates darker, deeper shades. The Canon OEM cartridges jointly produced the highest average black density.

Average Print Densities				
Cartridge Brand	Cyan	Magenta	Yellow	Black
Canon	0.87	0.93	0.84	1.17
123	0.83	0.75	0.69	1.07
Picture Expert	0.83	0.93	0.74	1.06
Stinky ink	0.85	1.06	0.84	1.08
HQ-Patronen	0.93	0.99	0.83	1.17
Prestige	0.83	0.92	0.74	1.07
Peach	0.89	0.92	0.76	1.14
KMP	0.86	1.05	0.83	1.11
Cartridge Kingdom	0.86	0.93	0.79	1.01
LX Tek	0.88	0.95	0.83	1.13
Colour Direct	0.81	0.91	0.74	0.97

The higher the number, the higher the density.

Average Densities (80 gsm)
(Canon PIXMA iP7250)

This graph shows the average optical densities of output from each cartridge brand. The higher the number, the higher the density.

COLOUR GAMUT

The Canon OEM brand's average colour gamut volume is the second highest, just below the KMP brand's average colour gamut volume. The lowest average colour gamut volume belongs to the 123 brand, whose average colour gamut volume was 27% lower than the Canon OEM ink's average colour gamut volume.

Average Colour Gamut (80 gsm)
(Canon PIXMA iP7250)

This graph shows the average colour gamut volume for each ink cartridge brand. Canon’s average colour gamut is coloured blue.

WICKING TEST

Wicking can cause output to look sub-par and text to be messy or even illegible. It manifests itself as thin streaks of ink that emanate from the intended print location, perhaps as a line emanating from a text character. In Buyers Lab’s testing, none of the brands tested showed signs of wicking.

Wicking and Bleed (80 gsm)
(Canon PIXMA iP7250)

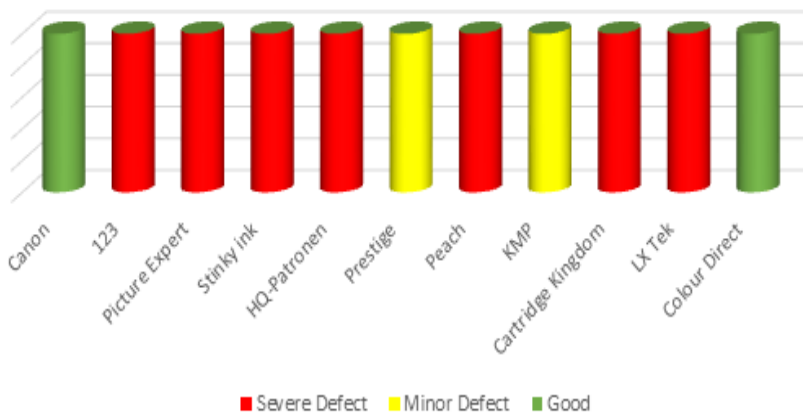

This graph shows the percentage of each cartridge brand’s image quality samples that were considered to have a minor defect, a severe defect, or be good as a result of Buyers Lab’s Wicking test. Each grade is indicated by a colour, such as yellow, which represents a minor defect.

WATERFASTNESS TEST

Sometimes printed output will come in contact with moisture, so it’s important for the end-user that exposure to that moisture doesn’t have too much of an adverse effect on output. To test the impact of moisture on copy, Buyers Lab’s lab technicians deposited a measured quantity of water on output printed with each ink cartridge brand and allowed it to dry.

Of the 11 cartridge brands tested, only two of them (Canon OEM and Colour Direct) passed the waterfastness test, while the remaining 82% of cartridge brands failed the test. Two of the third-party brands—prestige and KMP—were deemed to have minor defects that resulted in test failure, while the rest were considered to have severe defects.

Waterfastness Test Results (80 gsm)
(Canon PIXMA iP7250)

This graph shows how output from each cartridge brand fared in Buyers Lab’s waterfastness test, with the quality of the image sample used denoted by a colour. A sample deemed unsuitable for use both outside and inside of a company would be coloured red, for example.

HIGHLIGHTER TEST

Highlighting printed output is a common practice, so it’s important that the act of highlighting the printed part of a document doesn’t cause the ink to smudge and make print illegible. Image quality samples from all of the ink cartridge brands tested passed Buyers Lab’s highlighter test.

Highlighter Test Results (80 gsm)
(Canon PIXMA iP7250)

This graph shows how output from each cartridge brand fared in Buyers Lab’s Highlighter test, with the quality of the image sample used denoted by a colour. A sample deemed unsuitable for use both outside and inside of a company would be coloured red, for example.

Canon PIXMA TS5150 (260 gsm)

HALFTONES (260 GSM)

All of the 20 halftone samples printed with the Canon OEM ink were considered good enough to use inside or outside of an organization. Only three brands produced output that was deemed to have minor defects: Peach, 5 Star, and CMYBabee. Only one (6%) of the CMYBabee brand’s 16 halftone samples was deemed to have a minor defect, but 27% of the Peach brand’s samples (three samples) and 67% of the 5 Star brand’s samples (two samples) were considered only good enough for use within a company.

Please note that the 123, Cartridge Kingdom, and Prestige brands did not produce a high enough yield to print any of the image quality targets.

This graph shows the percentage of each cartridge brand’s halftone image quality samples that were deemed to have a minor defect, a severe defect, or be good. Each grade is indicated by a colour, such as yellow, which represents a minor defect. As an example, 100% of the Canon OEM brand’s image quality samples were deemed to be good, so 100% of the Canon OEM brand’s cylinder is coloured green. The graph also shows the number of image quality samples of each grade (the Canon OEM brand produced 20 image quality samples, for example, while the KMP brand produced three).

TEXT AND FINE LINES (260 GSM)

The quality of text and fine lines of all ink cartridge brands was considered good. However, please note that the 123, Cartridge Kingdom, and Prestige brands did not produce a high enough yield to print any of the image quality targets.

Text and Fine Line Quality (260 gsm)
(Canon PIXMA TS5150)

This graph shows the percentage of each cartridge brand’s text and fine line image quality samples that were considered to have a minor defect, a severe defect, or be good. Each grade is indicated by a colour, such as yellow, which represents a minor defect. As an example, 100% of the Canon OEM brand’s image quality samples were deemed to be good, so 100% of the Canon OEM brand’s cylinder is coloured green. The graph also shows the number of image quality samples of each grade (the Canon OEM brand produced 20 image quality samples, for example, while the KMP brand produced three).

OPTICAL DENSITY (260 GSM)

A higher optical density reading for black output indicates darker, deeper shades. When tested with 260 gsm media, the Canon OEM ink produced the highest average for black.

Please note that the 123, Cartridge Kingdom, and Prestige brands didn’t produce a high enough yield to print image quality samples.

Average Print Densities				
Cartridge Brand	Cyan	Magenta	Yellow	Black
Canon	0.90	1.56	0.82	1.25
123	–	–	–	–
Picture Expert	0.83	1.44	0.70	1.11
KMP	0.73	1.31	0.66	1.16
HQ-Patronen	0.84	1.43	0.70	1.12
Prestige	–	–	–	–
Peach	0.81	1.49	0.71	1.14
Cartridge Kingdom	–	–	–	–
5 Star	0.81	1.37	0.61	1.12
CMYBabee	0.92	1.49	0.67	0.50
Stinky Ink	0.93	1.37	0.62	0.82

The higher the number, the higher the density.

Average Densities (260 gsm)
(Canon PIXMA TS5150)

This graph shows the average optical densities of output from each cartridge brand. The higher the number, the higher the density.

COLOUR GAMUT (260 GSM)

When tested using 260 gsm media, the Canon OEM ink had the highest colour gamut volume of all brands tested. The 5 Star ink had the lowest average colour gamut volume (275,749 compared to 381,636), with the Canon OEM's colour gamut volume being 38% higher than the 5 Star's.

Average Colour Gamut (260 gsm)
(Canon PIXMA TS5150)

This graph shows the average colour gamut volume for each ink cartridge brand. Canon's average colour gamut is coloured blue.

WICKING TEST (260 GSM)

Wicking can cause output to look sub-par and text to be messy or even illegible. It manifests itself as thin streaks of ink that emanate from the intended print location, perhaps as a line emanating from a text character. In Buyers Lab’s testing, none of the brands tested showed signs of wicking.

This graph shows the percentage of each cartridge brand’s image quality samples that were considered to have a minor defect, a severe defect, or be good as a result of Buyers Lab’s Wicking test. Each grade is indicated by a colour, such as yellow, which represents a minor defect.

WATERFASTNESS TEST (260 GSM)

Sometimes printed output will come in contact with moisture, so it’s important for the end-user that exposure to that moisture doesn’t have too much of an adverse effect on output. To test the impact of moisture on copy, Buyers Lab’s lab technicians deposited a measured quantity of water on output printed with each ink cartridge brand and allowed it to dry.

When tested using 260 gsm media, all of the brands passed Buyers Lab’s waterfastness test.

This graph shows how output from each cartridge brand fared in Buyers Lab’s waterfastness test, with the quality of the image sample used denoted by a colour. A sample deemed unsuitable for use both outside and inside of a company would be coloured red, for example.

HIGHLIGHTER TEST (260 GSM)

Highlighting printed output is a common practice, so it’s important that the act of highlighting the printed part of a document doesn’t cause the ink to smudge and make print illegible. Image quality samples from all of the ink cartridge brands tested passed Buyers Lab’s highlighter test.

Highlighter Test Results (260 gsm)
(Canon PIXMA TS5150)

This graph shows how output from each cartridge brand fared in Buyers Lab’s Highlighter test, with the quality of the image sample used denoted by a colour. A sample deemed unsuitable for use both outside and inside of a company would be coloured red, for example.

Canon PIXMA TS5050 (260 gsm)

HALFTONES (260 GSM)

When printed on 260 gsm media, all of the image samples from all of the cartridge brands were considered good enough to use inside or outside of an organization.

Halftone Quality (260 gsm)
(Canon PIXMA TS5050)

This graph shows the percentage of each cartridge brand’s halftone image quality samples that were deemed to have a minor defect, a severe defect, or be good. Each grade is indicated by a colour, such as yellow, which represents a minor defect. As an example, 100% of the Canon OEM brand’s image quality samples were deemed to be good, so 100% of the Canon OEM brand’s cylinder is coloured green. The graph also shows the number of image quality samples of each grade (the Canon OEM brand produced 15 image quality samples, for example, while the 123-branded cartridges produced nine).

TEXT AND FINE LINES (260 GSM)

The quality of text and fine lines of all ink cartridge brands was considered good when printed on 260 gsm media.

Text and Fine Line Quality (260 gsm)
(Canon PIXMA TS5050)

This graph shows the percentage of each cartridge brands’ text and fine line image quality samples that are considered to have a minor defect, a severe defect, or be good. Each grade is indicated by a colour, such as yellow, which represents a minor defect. As an example, 100% of the Canon OEM brand’s image quality samples were deemed to be good, so 100% of the Canon OEM brand’s cylinder is coloured green. The graph also shows the number of image quality samples of each grade (the Canon OEM brand produced 15 image quality samples, for example, while the Peach brand produced eleven).

OPTICAL DENSITY (260 GSM)

A higher optical density reading for black output indicates darker, deeper shades. When tested with 260 gsm media, the Canon OEM ink produced an average black density that is fourth highest and comparable overall.

Average Print Densities				
Cartridge Brand	Cyan	Magenta	Yellow	Black
Canon	0.89	1.83	0.93	1.55
123	0.86	2.00	0.93	1.49
Picture Expert	0.83	1.75	0.77	1.34
KMP	0.88	2.02	0.87	1.58
HQ-Patronen	0.80	1.90	0.78	1.51
Prestige	1.15	1.69	0.72	1.61
Peach	0.84	1.80	0.80	1.38
Stinky Ink	0.99	1.97	0.90	1.58
Cartridge Kingdom	0.73	2.05	0.88	1.37
LX Tek	0.91	1.67	0.90	1.45
Colour Direct	1.07	1.86	0.86	1.60

The higher the number, the higher the density.

Average Densities (260 gsm)
(Canon PIXMA TS5050)

This graph shows the average optical densities of output from each cartridge brand. The higher the number, the higher the density.

COLOUR GAMUT (260 GSM)

When tested using 260 gsm media, the Canon OEM ink had the third-highest colour gamut volume of all brands tested, with the 123 and Stinky Ink brands having a higher average colour gamut. The HQ-Patronen, Prestige, and Picture Expert brands had the three lowest average colour gamuts.

Average Colour Gamut (260 gsm)
(Canon PIXMA TS5050)

This graph shows the average colour gamut volume for each ink cartridge brand. Canon’s average colour gamut is coloured blue.

Average Colour Gamut Volumes	
HQ-Patronen	382,733
Prestige	386,837
Picture Expert	414,031
Peach	427,217
Cartridge Kingdom	431,057
LX Tek	450,245
Colour Direct	467,145
KMP	473,677
Canon	485,701
123	494,349
Stinky Ink	512,258

WICKING TEST (260 GSM)

Wicking can cause output to look sub-par and text to be messy or even illegible. It manifests itself as thin streaks of ink that emanate from the intended print location, perhaps as a line emanating from a text character. In Buyers Lab’s testing, none of the brands tested showed signs of wicking when output was printed on 260 gsm media.

Wicking and Bleed (260 gsm)
(Canon PIXMA TS5050)

This graph shows the percentage of each cartridge brand’s image quality samples that were considered to have a minor defect, a severe defect, or be good as a result of Buyers Lab’s Wicking test. Each grade is indicated by a colour, such as yellow, which represents a minor defect.

WATERFASTNESS TEST (260 GSM)

Sometimes printed output will come in contact with moisture, so it’s important for the end-user that exposure to that moisture doesn’t have too much of an adverse effect on output. To test the impact of moisture on copy, Buyers Lab’s lab technicians deposited a measured quantity of water on output printed with each ink cartridge brand and allowed it to dry.

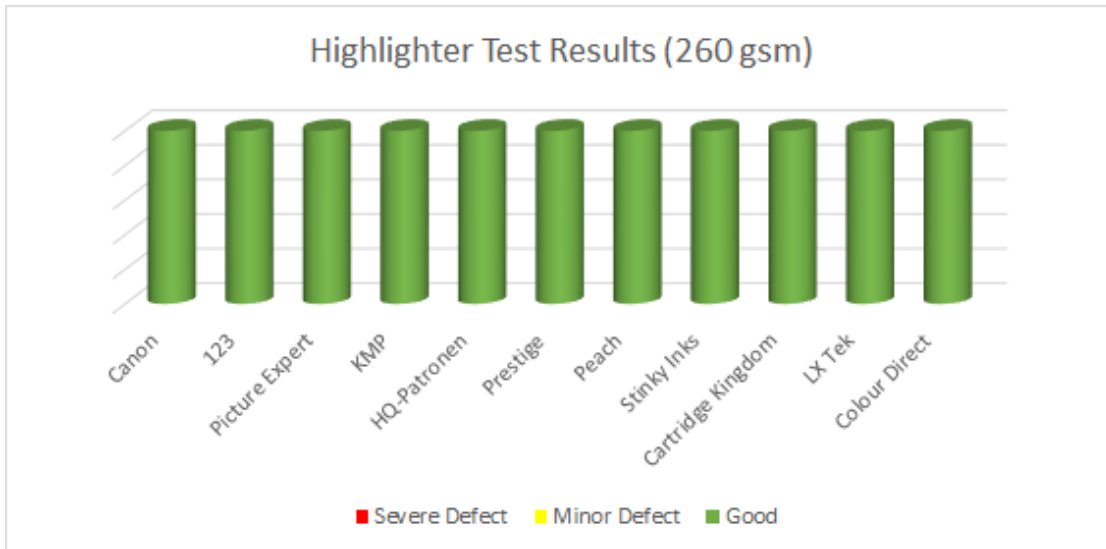

When tested using 260 gsm media, all of the brands passed Buyers Lab’s waterfastness test.

This graph shows how output from each cartridge brand fared in Buyers Lab’s waterfastness test, with the quality of the image sample used denoted by a colour. A sample deemed unsuitable for use both outside and inside of a company would be coloured red, for example.

HIGHLIGHTER TEST (260 GSM)

Highlighting printed output is a common practice, so it’s important that the act of highlighting the printed part of a document doesn’t cause the ink to smudge and make print illegible. Image quality samples from all of the ink cartridge brands tested passed Buyers Lab’s highlighter test.

This graph shows how output from each cartridge brand fared in Buyers Lab’s Highlighter test, with the quality of the image sample used denoted by a colour. A sample deemed unsuitable for use both outside and inside of a company would be coloured red, for example.

Canon PIXMA iP7250 (260 gsm)

HALFTONES (260 GSM)

When printed on 260 gsm media, all of the Canon OEM’s halftone quality samples were considered good enough for use within or outside an organization, while 50% of the other cartridge brands tested produced at least one halftone quality sample that was deemed to have a defect. The Stinky Ink, Prestige, KMP, and Cartridge Kingdom brands all produced at least one halftone quality sample that was deemed to have a severe defect that prevented its distribution outside of a company and its informal use within a company. Indeed, 75% of the Cartridge Kingdom brand’s halftone quality samples were deemed to have a severe or minor defect.

Halftone Quality (260 gsm)
(Canon PIXMA iP7250)

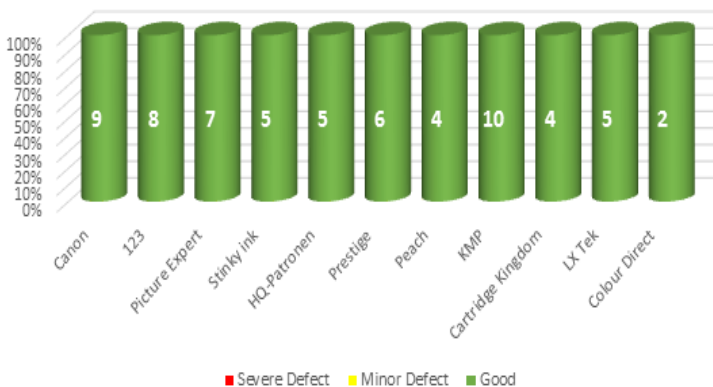

This graph shows the percentage of each cartridge brand’s halftone image quality samples that are deemed to have a minor defect, a severe defect or to be good. Each grade is indicated by a colour, such as yellow, which represents a minor defect. As an example, two of the Cartridge Kingdom brand’s four halftone image quality samples were deemed to be have a severe defect, so 50% of the Cartridge Kingdom brand’s cylinder is coloured red. The graph also shows the number of image quality samples of each grade (the Canon OEM brand produced nine image quality samples, for example, while the Colour Direct-branded cartridges produced two).

TEXT AND FINE LINES (260 GSM)

The quality of text and fine lines of all ink cartridge brands was considered good when printed on 260 gsm media.

Text and Fine Line Quality (260 gsm)
(Canon PIXMA iP7250)

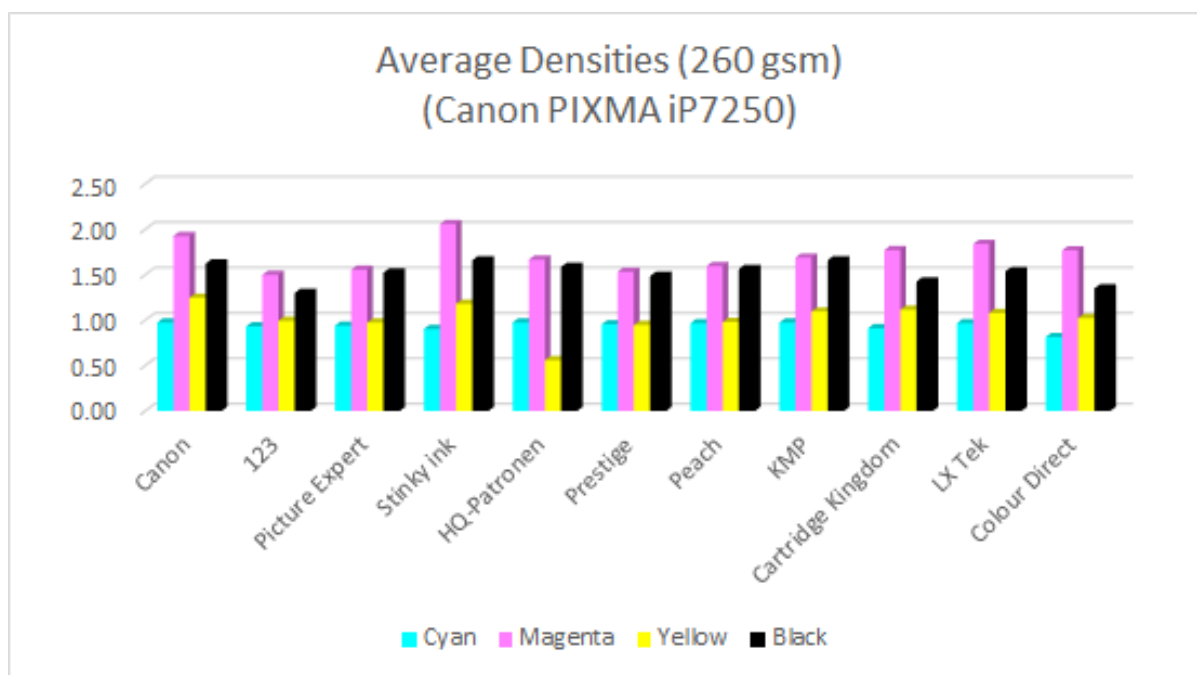

This graph shows the percentage of each cartridge brand’s text and fine line image quality samples that are considered to have a minor defect, a severe defect, or be good. Each grade is indicated by a colour, such as yellow, which represents a minor defect. As an example, 100% of the Canon OEM brand’s image quality samples were deemed to be good, so 100% of the Canon OEM brand’s cylinder is coloured green. The graph also shows the number of image quality samples of each grade (the Canon OEM brand produced nine image quality samples, for example, while the Peach brand produced four).

OPTICAL DENSITY (260 GSM)

A higher optical density reading for black output indicates darker, deeper shades. When tested with 260 gsm media, the Canon OEM ink produced the third-highest density for black output.

Average Print Densities				
Cartridge Brand	Cyan	Magenta	Yellow	Black
Canon	0.98	1.93	1.25	1.63
123	0.93	1.50	0.99	1.30
Picture Expert	0.94	1.56	0.98	1.53
Stinky ink	0.90	2.06	1.18	1.66
HQ-Patronen	0.98	1.67	0.56	1.59
Prestige	0.96	1.53	0.95	1.49
Peach	0.97	1.60	0.98	1.56
KMP	0.98	1.69	1.10	1.66
Cartridge Kingdom	0.91	1.77	1.12	1.43
LX Tek	0.97	1.84	1.08	1.54
Colour Direct	0.82	1.77	1.02	1.35

The higher the number, the higher the density.

This graph shows the average optical densities of output from each cartridge brand. The higher the number, the higher the density.

COLOUR GAMUT (260 GSM)

When tested using 260 gsm media, the Canon OEM ink had the highest average colour gamut volume of all brands tested. The 123, Prestige, and LX Tek brands had the lowest average colour gamuts, while the KMP brand had the closest average colour gamut to Canon.

Average Colour Gamut (260 gsm)
(Canon PIXMA iP7250)

This graph shows the average colour gamut volume for each ink cartridge brand. Canon’s average colour gamut is coloured blue.

Average Colour Gamut Volumes	
123	439,035
Prestige	464,497
LX Tek	465,460
Colour Direct	472,718
Peach	490,998
Picture Expert	496,104
Cartridge Kingdom	504,696
Stinky ink	514,696
HQ-Patronen	514,700
KMP	533,266
Canon	542,610

WICKING TEST (260 GSM)

Wicking can cause output to look sub-par and text to be messy or even illegible. It manifests itself as thin streaks of ink that emanate from the intended print location, perhaps as a line emanating from a text character. In Buyers Lab’s testing, none of the brands tested showed signs of wicking when output was printed on 260 gsm media.

Wicking and Bleed (260 gsm)
(Canon PIXMA iP7250)

This graph shows the percentage of each cartridge brand’s image quality samples that were considered to have a minor defect, a severe defect, or be good as a result of Buyers Lab’s Wicking test. Each grade is indicated by a colour, such as yellow, which represents a minor defect.

WATERFASTNESS TEST (260 GSM)

Sometimes printed output will come in contact with moisture, so it’s important for the end-user that exposure to that moisture doesn’t have too much of an adverse effect on output. To test the impact of moisture on copy, Buyers Lab’s lab technicians deposited a measured quantity of water on output printed with each ink cartridge brand and allowed it to dry.

When tested using 260 gsm media, all of the brands passed Buyers Lab’s waterfastness test.

Waterfastness Test Results (260 gsm)
(Canon PIXMA iP7250)

This graph shows how output from each cartridge brand fared in Buyers Lab’s waterfastness test, with the quality of the image sample used denoted by a colour. A sample deemed unsuitable for use both outside and inside of a company would be coloured red, for example.

HIGHLIGHTER TEST (260 GSM)

Highlighting printed output is a common practice, so it’s important that the act of highlighting the printed part of document doesn’t cause the ink to smudge and make print illegible. Image quality samples from all of the ink cartridge brands tested passed Buyers Lab’s highlighter test.

This graph shows how output from each cartridge brand fared in Buyers Lab’s Highlighter test, with the quality of the image sample used denoted by a colour. A sample deemed unsuitable for use both outside and inside of a company would be coloured red, for example.

Test Methodology

Buyers Lab used 40 Canon printers to test multiple compatible ink cartridge brands, including the Canon OEM brand. The OEM and third-party cartridges were run on the following devices: Canon PIXMA TS3150, Canon PIXMA TS5050, Canon PIXMA TS5150, and Canon PIXMA iP7250. While six third-party cartridge types were tested with the Canon PIXMA TS3150 device, 10 compatible brands were tested in the other devices. Cartridges for all ink cartridge brands were tested for page yield, reliability, and image quality. To eliminate cross contamination, brand-new devices were dedicated to the testing of each ink cartridge brand, with 40 devices used in total. Each ink cartridge brand was tested using an ISO test document and Buyers Lab’s proprietary image quality test targets, with each device being run until it had consumed 10 sets of ink cartridges.

An ink cartridge brand was allocated to a specific printer and Buyers Lab’s technicians exhausted three ink cartridge sets on each printer by printing the ISO 24712 test target suite. Each printer was operated in default mode via Buyers Lab’s network connection, with its PCL driver. Page yield, cartridge reliability and image quality were evaluated per the following:

A. Ink Yield: Ink cartridges of each ink brand were run to exhaustion on a brand-new Canon printer, printing on Mondi media. Yield was determined using the ISO 24712 colour test target. A comparative yield assessment was conducted to measure the genuine Canon ink cartridge’s performance against that of each “compatible” brand. Each cartridge was weighed before and after testing to determine net ink weight. Each cartridge was run until the “ink out” warning was displayed on the device’s LCD, provided that image quality remained acceptable and no reliability problems were encountered beforehand. When it had expired, the cartridge was removed and weighed, and the page count was recorded. The results of the “average-pages-printed” performance were calculated from the performance of all cartridges tested (including all “out-of-box” failures and print quality and reliability failures that occurred). Any cartridge malfunctions, including “out-of-box” failures, operation failures, ink leakage, cartridge flaws, and background on printed pages, as well as printer malfunctions caused by cartridges, were recorded. Cartridges classified as “out-of-box” failures are those that either could not be run due to excessive ink leakage, were broken, or had missing parts, as well as cartridges that produced only 20 or fewer acceptable pages in the test. Cartridges classified as “early end of life” are those that produced less than 75% of the rated yield.

B. Hardware Observations: Buyers Lab test technicians photographed any defective cartridges, ink leaks, error messages, and device contamination.

C. Reliability: Throughout testing, Buyers Lab test technicians recorded any cartridge malfunctions, such as operation failure, ink leakage, and background on printed pages, as well as device malfunctions caused by cartridges.

D. Image Quality: In evaluating image quality, Buyers Lab assessed the output quality over a selection of parameters, including solid density, fine lines, text reproduction and halftones at the start of testing and at every 500-impression interval thereafter. Output was graded from one to three, with one-grade output deemed unsuitable for use inside or outside of a company and three-grade output deemed suitable for either use. Image quality samples were printed on 80 gsm media and 260 gsm glossy media, except for output produced using a Canon PIXMA TS3150, which was printed on 80 gsm media only.

E. Impact of Water Spillage: Buyers Lab’s lab technicians used a proprietary test target to test the effect of dropping a measured amount of water on printed output. The water was added to the output placed on a flat surface. The output was also placed at a specific angle to test the visual impact of having a measured amount of water run over the test marker.

F. Impact of Highlighter Overwriting: Buyers Lab’s lab technicians used a proprietary test target to assess the impact of overwriting printed output with a highlighter pen. Buyers Lab’s technicians highlighted printed output, waited for two minutes and then performed a 300dpi scan on the output to create a searchable PDF to assess the effect of highlighter smearing on legibility.

Test Environment/Conditions

All testing was conducted in a controlled environment at Buyers Lab’s UK test facility located at Unit 11, The Business Centre, Molly Millars Lane, Wokingham, RG41 2QZ per the following conditions:

A. Temperature was maintained at 22°C, +/-2.7°C with daily conditions monitored and logged 24/7 by a Seven-Day Temperature/Humidity Chart Recorder.

B. Relative humidity was maintained within 45% +/- 10% with daily conditions monitored and logged 24/7 by a Seven-Day Temperature/Humidity Chart Recorder.

C. Materials conditioning: Printers, paper, and cartridges were acclimatized to the above conditions for a minimum of 24 hours prior to testing. Prior to acclimatization, packaging and shipping materials were opened in a manner that prevented damage from occurring to the print cartridge during acclimatization. Paper was acclimatized in a ream wrapper.

All devices and cartridges used in testing were purchased by Buyers Lab on the open market.

About Keypoint Intelligence - Buyers Lab

Keypoint Intelligence is a one-stop shop for the digital imaging industry. With our unparalleled tools and unmatched depth of knowledge, we cut through the noise of data to offer clients the unbiased insights and responsive tools they need in those mission-critical moments that define their products and empower their sales.

For over 50 years, Buyers Lab has been the global document imaging industry’s resource for unbiased and reliable information, test data, and competitive selling tools. What started out as a consumer-based publication about office equipment has become an all-encompassing industry resource. Buyers Lab evolves in tandem with the ever-changing landscape of document imaging solutions, constantly updating our methods, expanding our offerings, and tracking cutting-edge developments.

For more information, please call David Sweetnam at +44 (0) 118 977 2000 or email him at david.sweetnam@keypointintelligence.com
