

SUPPORTING SECURE CONNECTED HEALTHCARE OPERATIONS

As the National Health Service (NHS) continue to digitise, secure and reliable print and scan infrastructure plays a critical role in keeping community services running, information protected and teams productive.

For NHS services, achieving this means balancing three, critical priorities that closely reflect the strategic shift underway across NHS services.

uniFLOW Online provides consistent, secure control of print and scan environments across the NHS, helping organisations operate confidently through ongoing digital and service change.

Built on Microsoft Azure, our award-winning print and scan management platform enables centralised control across the enterprise, while maintaining the highest standards of information security.

Maintaining service continuity across increasingly distributed digital care environments

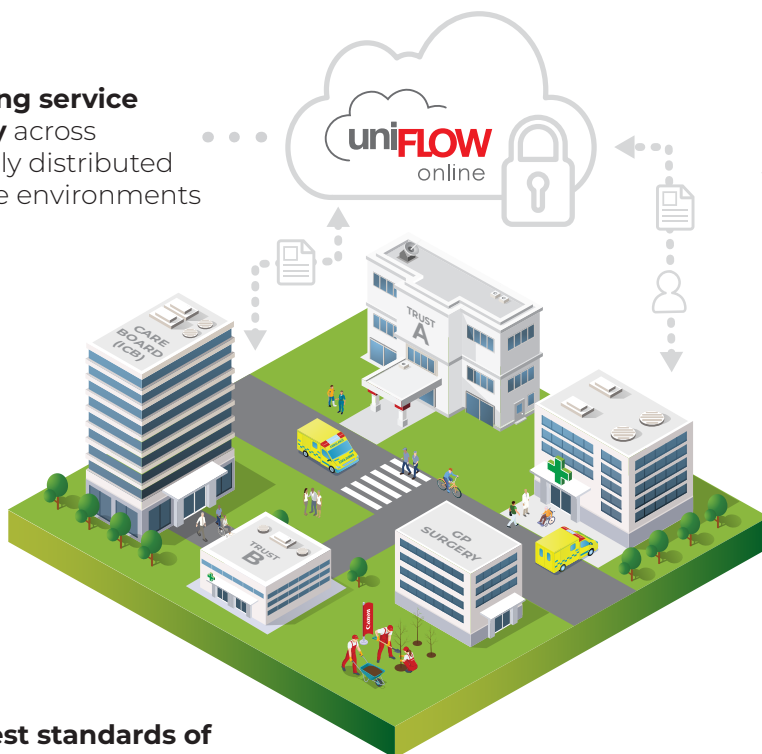

Managing ageing estates during the shift from analogue to digital infrastructure

Turning digital investment into **sustainable productivity gains**

The highest standards of information security
Protecting NHS services from cyber-crime, safeguarding sensitive information and minimising the domino effect of security obstacles while delivering neighbourhood health services.

Secure, centralised control across the enterprise
Reducing reliance on on-site infrastructure while supporting modern, closer-to-home care models and easing pressure on hospital services.

Consistent policy enforcement
Supporting collaboration across teams and partners, helping turn digital investment into measurable and sustained productivity gains.

RESPOND TO THE NHS CHALLENGES WITH UNIFLOW ONLINE

Protecting services and patient data at every step, ensuring access by authorised staff only:

- Secure print release requires user identification at the device.
- Supports proximity card login, mobile phone, PIN, or a combination of methods.
- The only solution designed from the ground-up to support micro-segmented Zero Trust environments.

Reducing reliance on on-site infrastructure across sites through:

- Cloud-based management, removing the need for print servers.
- Secure remote device access, minimising the need for site visits.
- One consistent approach across hospitals, clinics, and shared locations.

Speeding up everyday tasks while maintaining service consistency:

- My print anywhere enables secure printing at any authorised device.
- Advanced OCR scanning creates searchable digital documents.
- Reporting provides visibility into print, scan and copy activity, enabling cost control and responsible printing behaviour.
